

Tips and tricks

Using wire cutters instead of scissors

The instructions in the kits suggest using scissors to cut the dowels and it works very well. If you have wire cutters however, the measuring and cutting is very easy!

1. Push the dowel through the side piece into and into the end piece.

2. With the dowel snugly in, snip off right at the wood. You get a smooth and accurate cut.

3. Do this with each corner.

In no time you have exact cuts. Take it apart then glue it up!
